

## Assignment 6 - 6367

### Problem 1 (KNN Tiny Model)

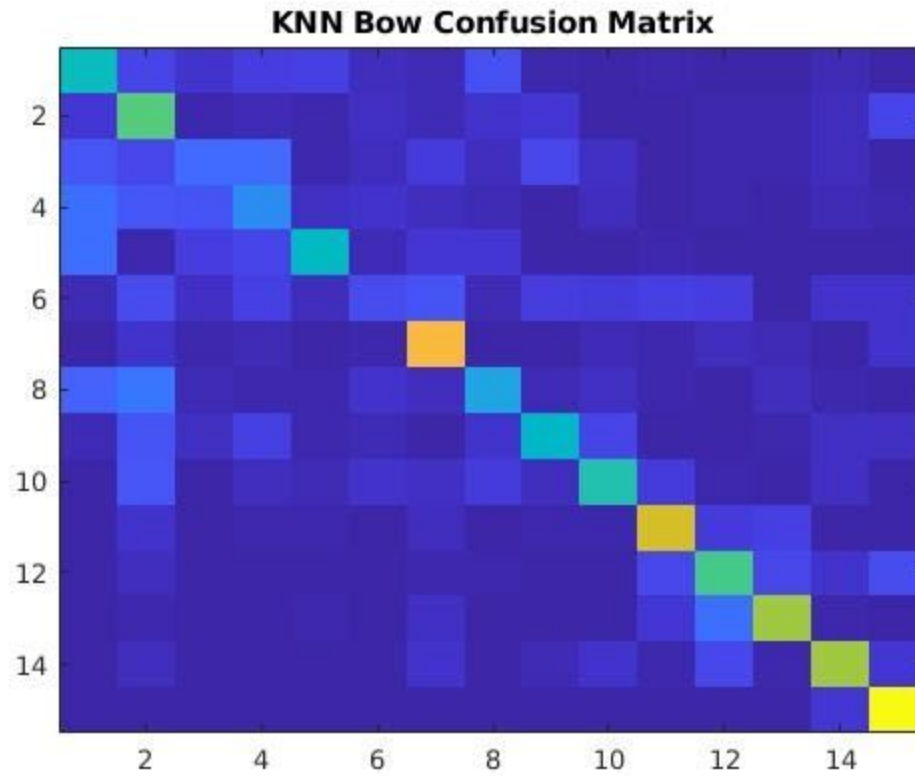

**Tiny Image Size:** (16x16)

**K = 5** (for KNN)

**Accuracy:** 19.4667%

## Problem 2 (KNN with BoW)

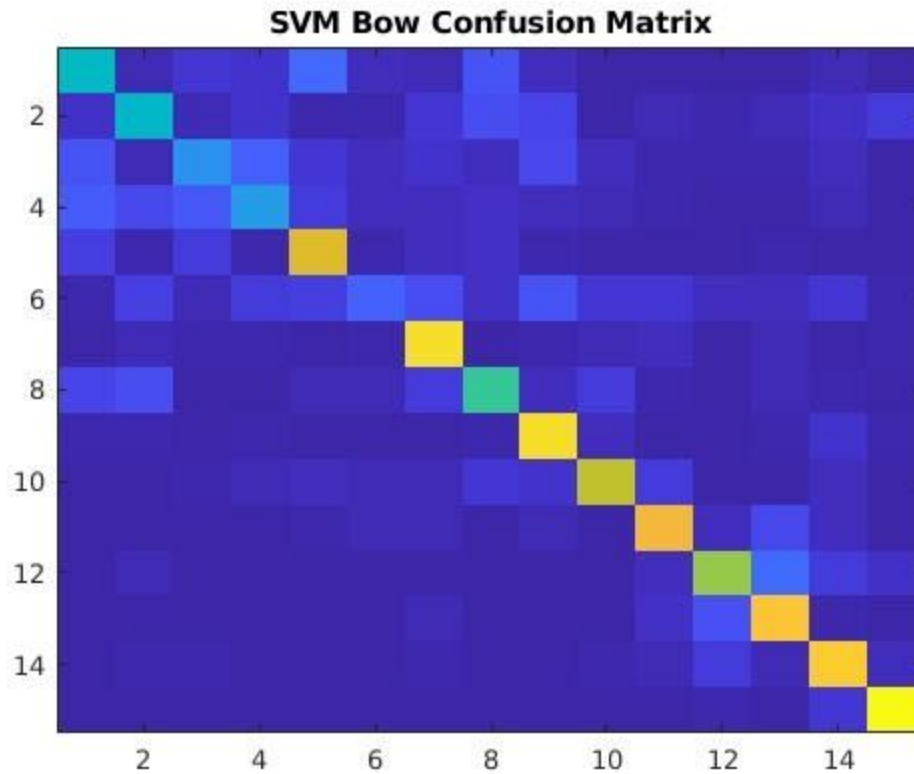

**Dict\_size = 50**

**SIFT Feature Dimension: 128**

**K = 7 (for KNN)**

**Accuracy: 51.4%**

## Extra Credit (SVM with BoW)

**Dict\_size = 50**

**SIFT Feature Dimension = 128**

**Accuracy: 62%**

Out of the three model combinations, SVM with Bag of Words (BoW) performed the best because BoW is a better representation of an image than the Tiny Image and SVM is a better classifier than KNN.
